

Barcham

The Tree Specialists

Our Environmental Commitment

Reducing our Environmental Impact

Compost & Fertiliser

We are actively looking to use more peat free composts as well as finding more natural ways to encourage growth in our tree stock.

Water Consumption

As part of our drive to be efficient in our water use our nursery has two large reservoirs which serve our irrigation needs throughout the summer months.

Pesticides

At Barcham we work closely with our suppliers to find less harmful alternatives to pest and disease control.

Reducing our Environmental Impact

Waste Management

We ensure that as much of our waste is recycled as possible with the help of our waste management partners.

Bio-Security

Barcham Trees are a market leader in the prevention of Pest and Disease entering the UK, through the implementation of our Bio-Security measures.

Transport

Our despatch team work hard to ensure, where possible, deliveries are grouped together to lesson our impact on the environment.

At Barcham Trees we take our Environmental impact very seriously, we are always looking for ways to reduce our impact.

To demonstrate our commitment to the Environment we are currently working towards ISO 14001 accreditation.
