

**The British treescape, past, present and future at
Windsor Great Park**

**Where was it? What was it? Using
old maps to inform restoration
and enhancement of ancient
treescapes.**

**John P Smith Mosaic Mapping
and the Ancient Tree Forum**

In Oliver Rackham's 1986 book *The History of the Countryside* he talks of the rural maps of the 1860's and 70's,

'which attempt to record every hut and hedgerow tree; the zenith of rural mapmaking in Britain and perhaps in the world'

Later, he goes further, in "Woodlands" published in 2006 stating

"in general the first edition 25-inch tried to show every non-woodland tree in Britain, and as far as can be checked got them right."

What follows is an example of a site where I have attempted to verify this

Ancient Tree Inventory data

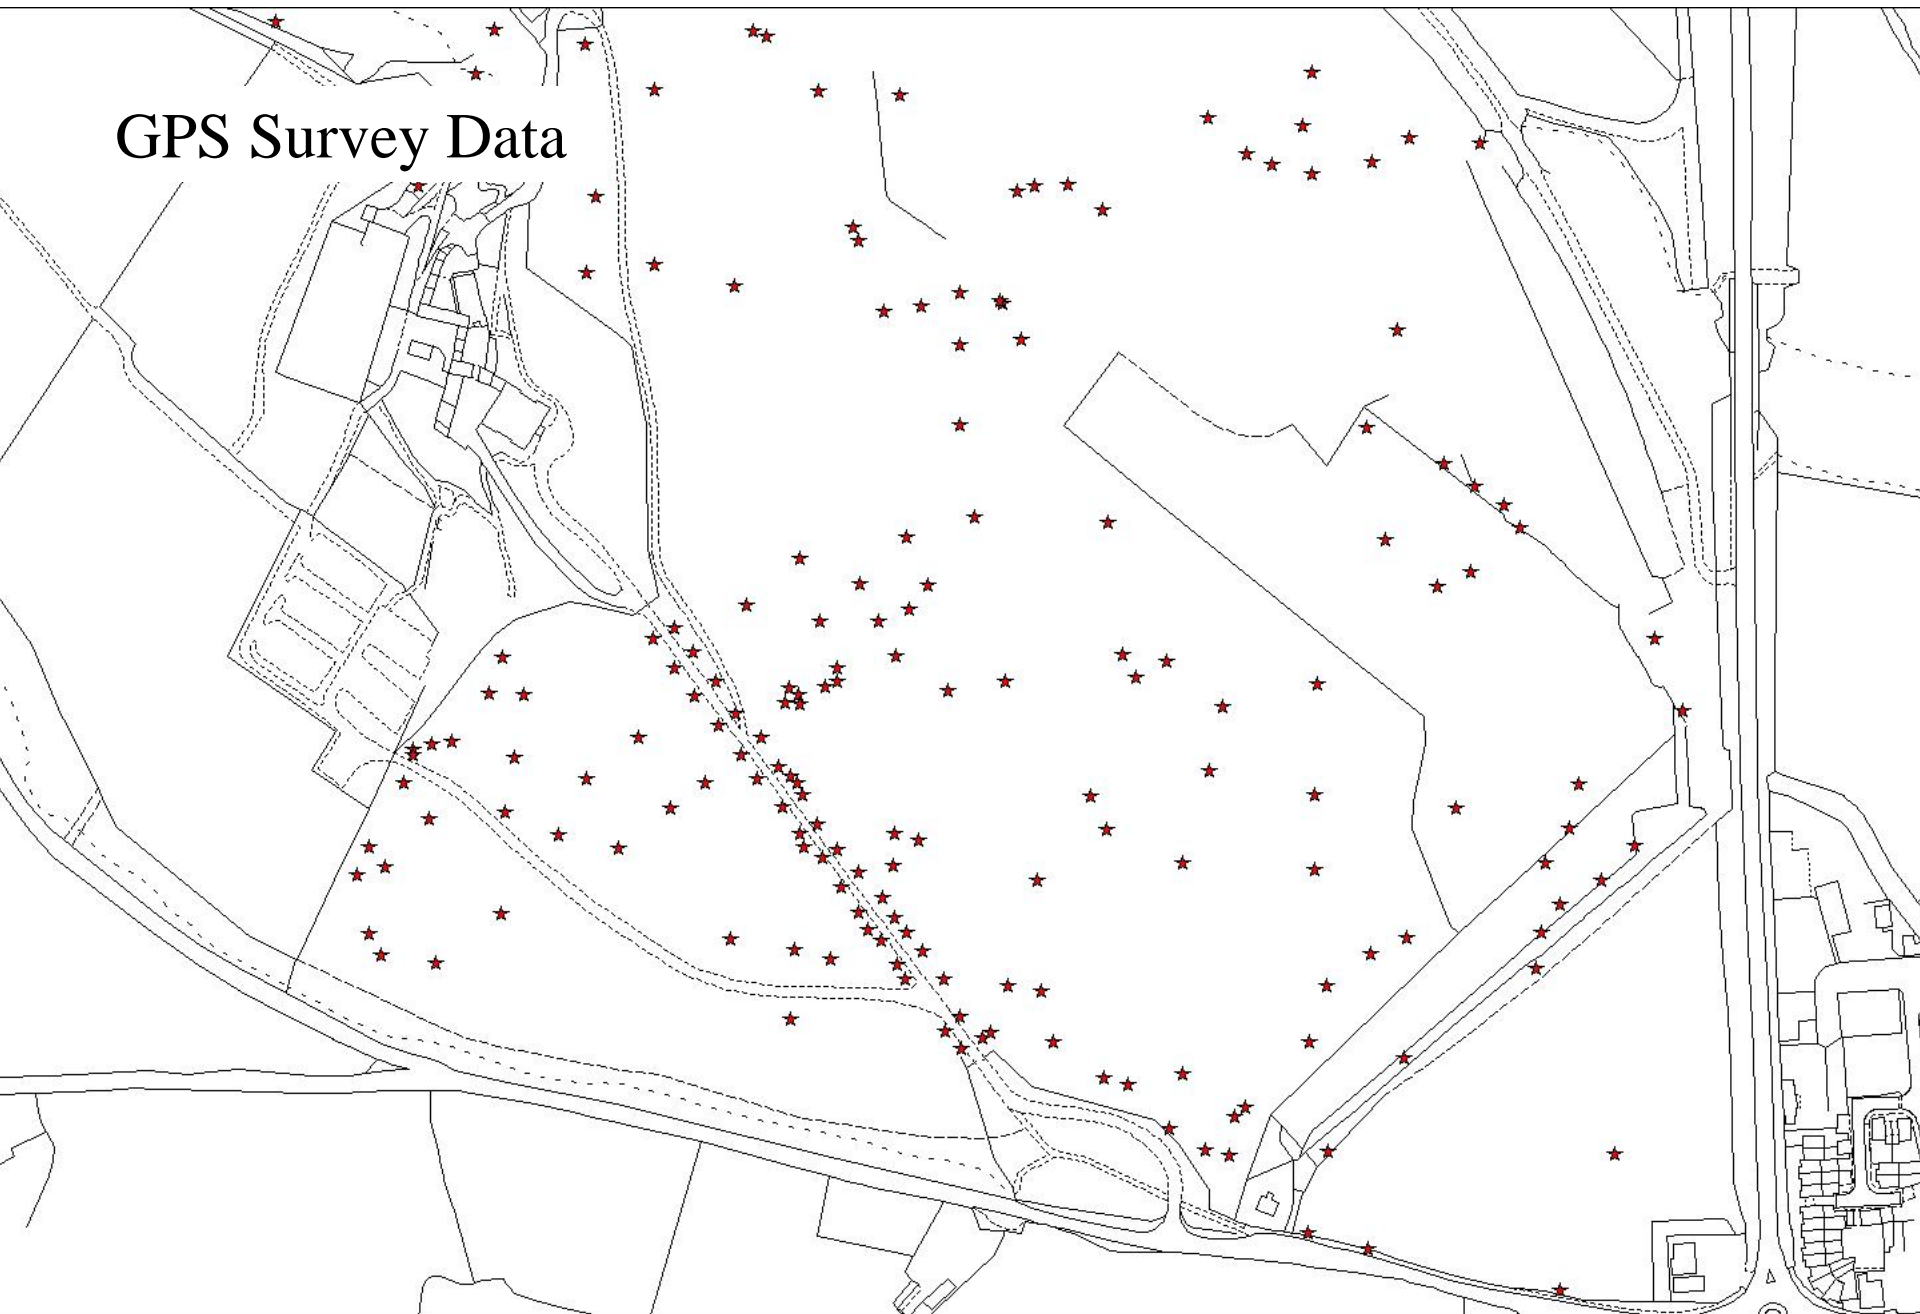

Parke, Devon

Current OS Base Mapping

GPS Survey Data

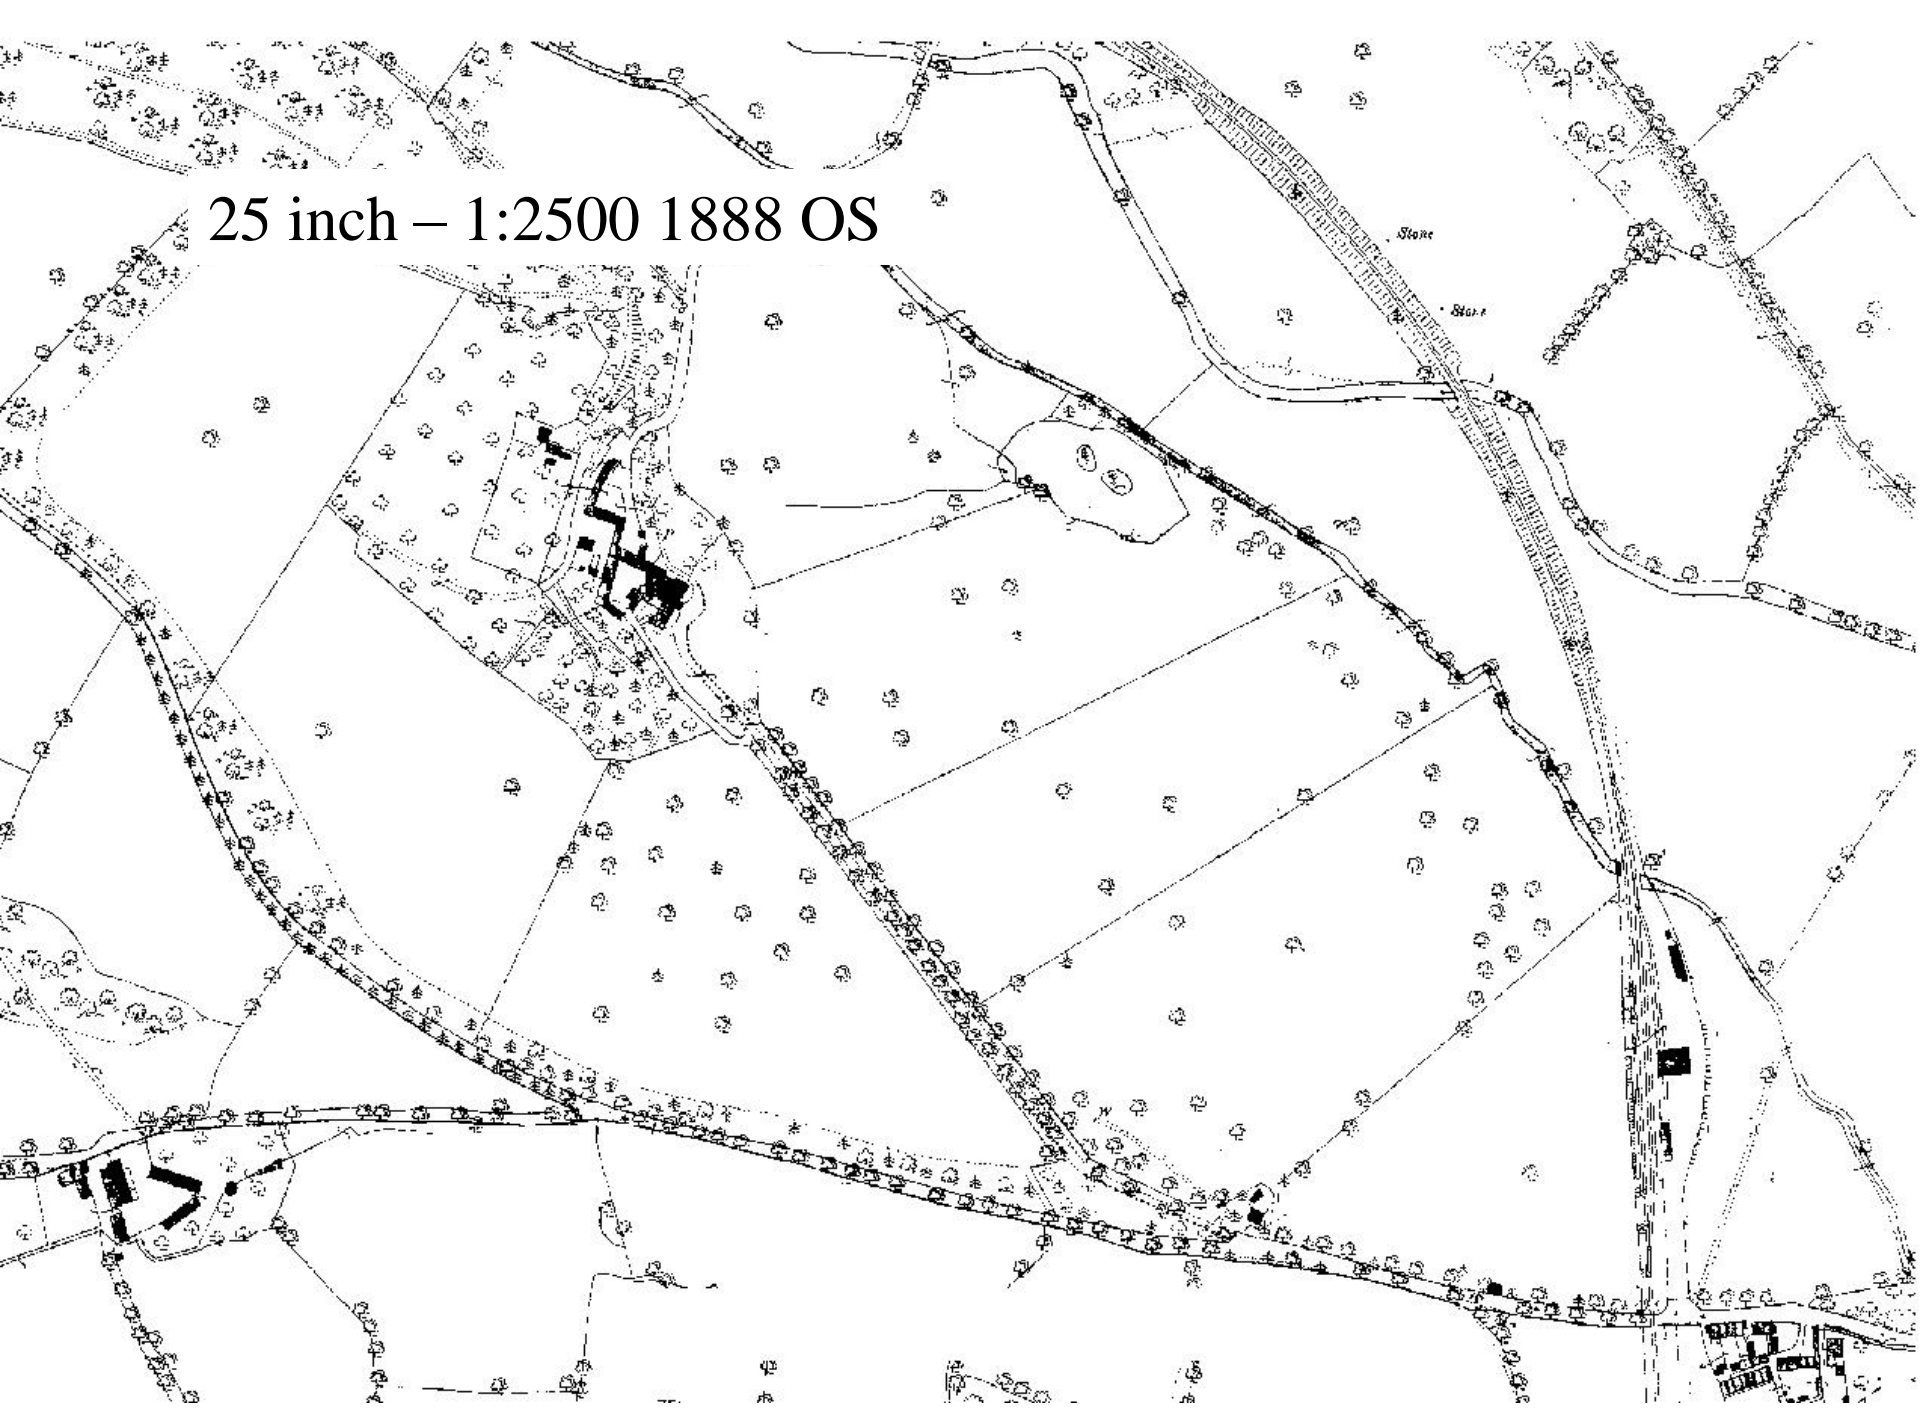

With air imagery

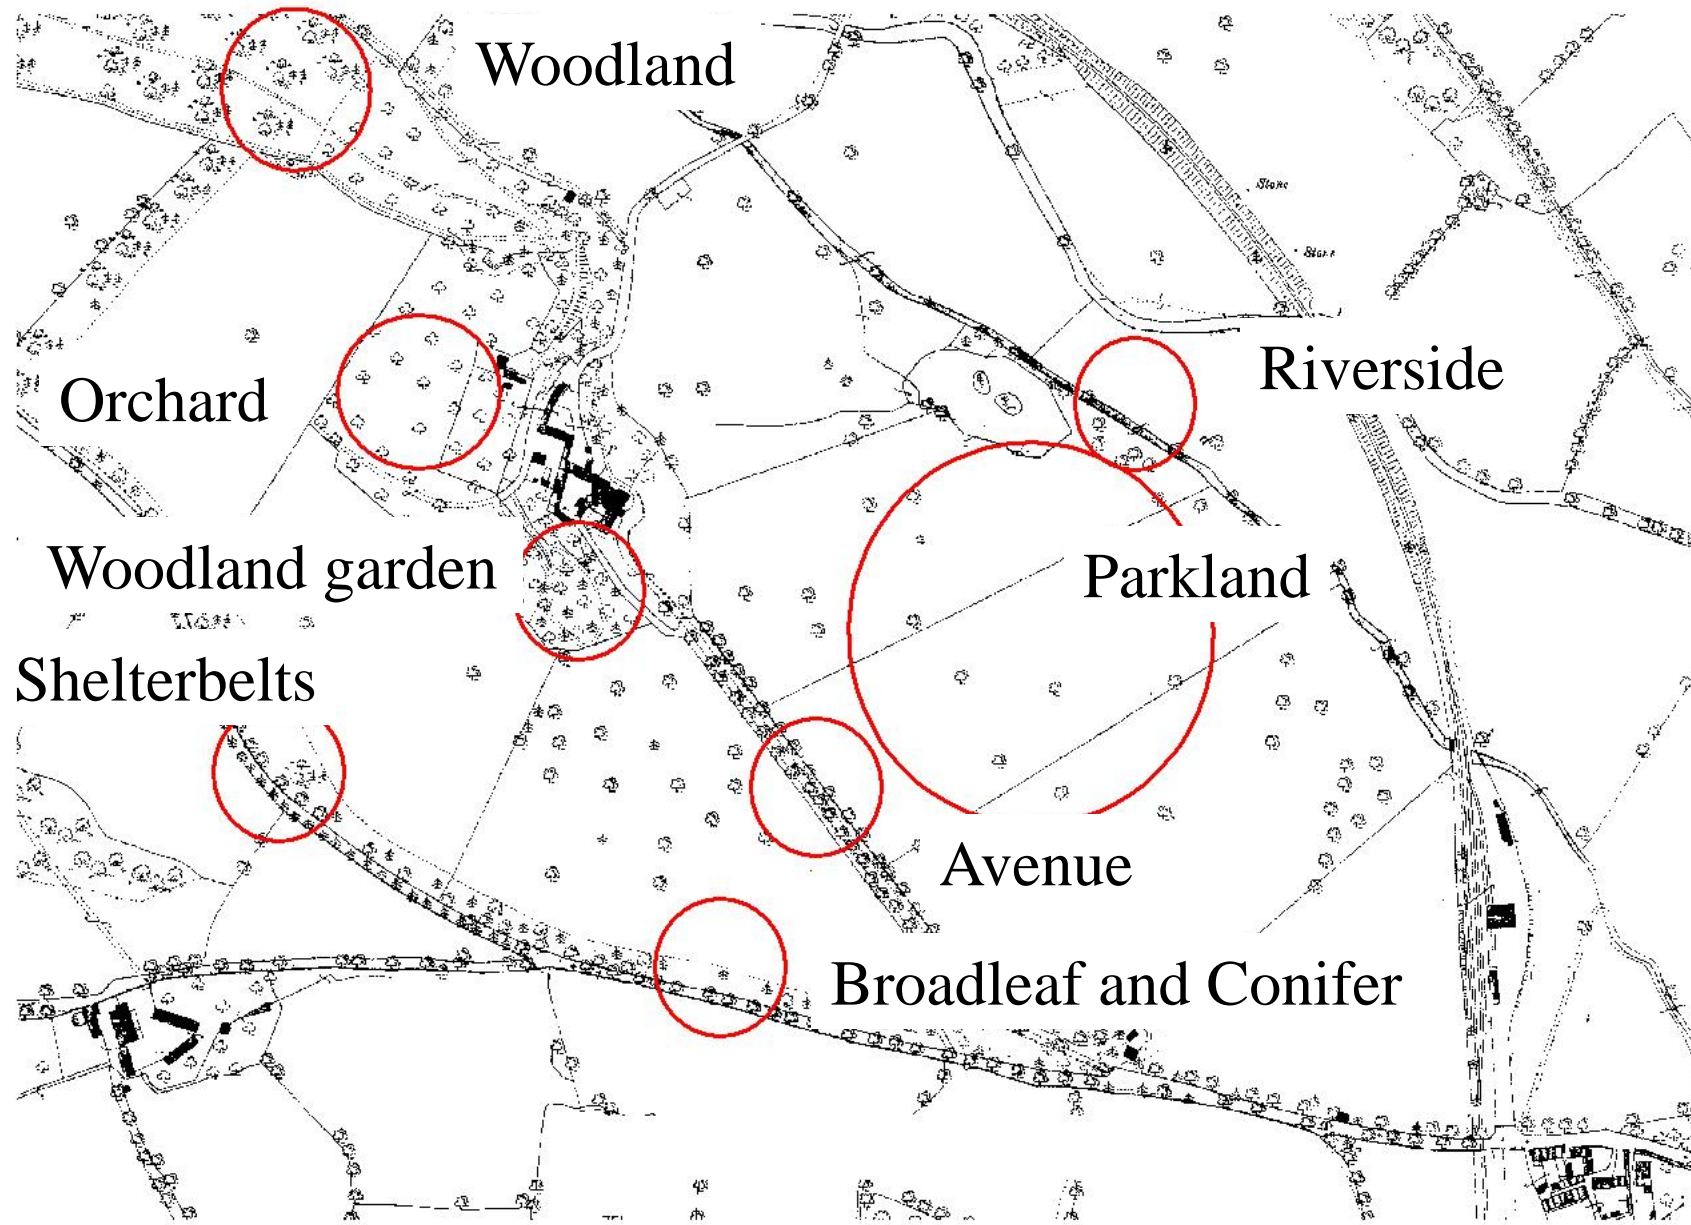

ATI Early OS mapping

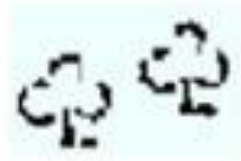

25 inch – 1:2500 1888 OS

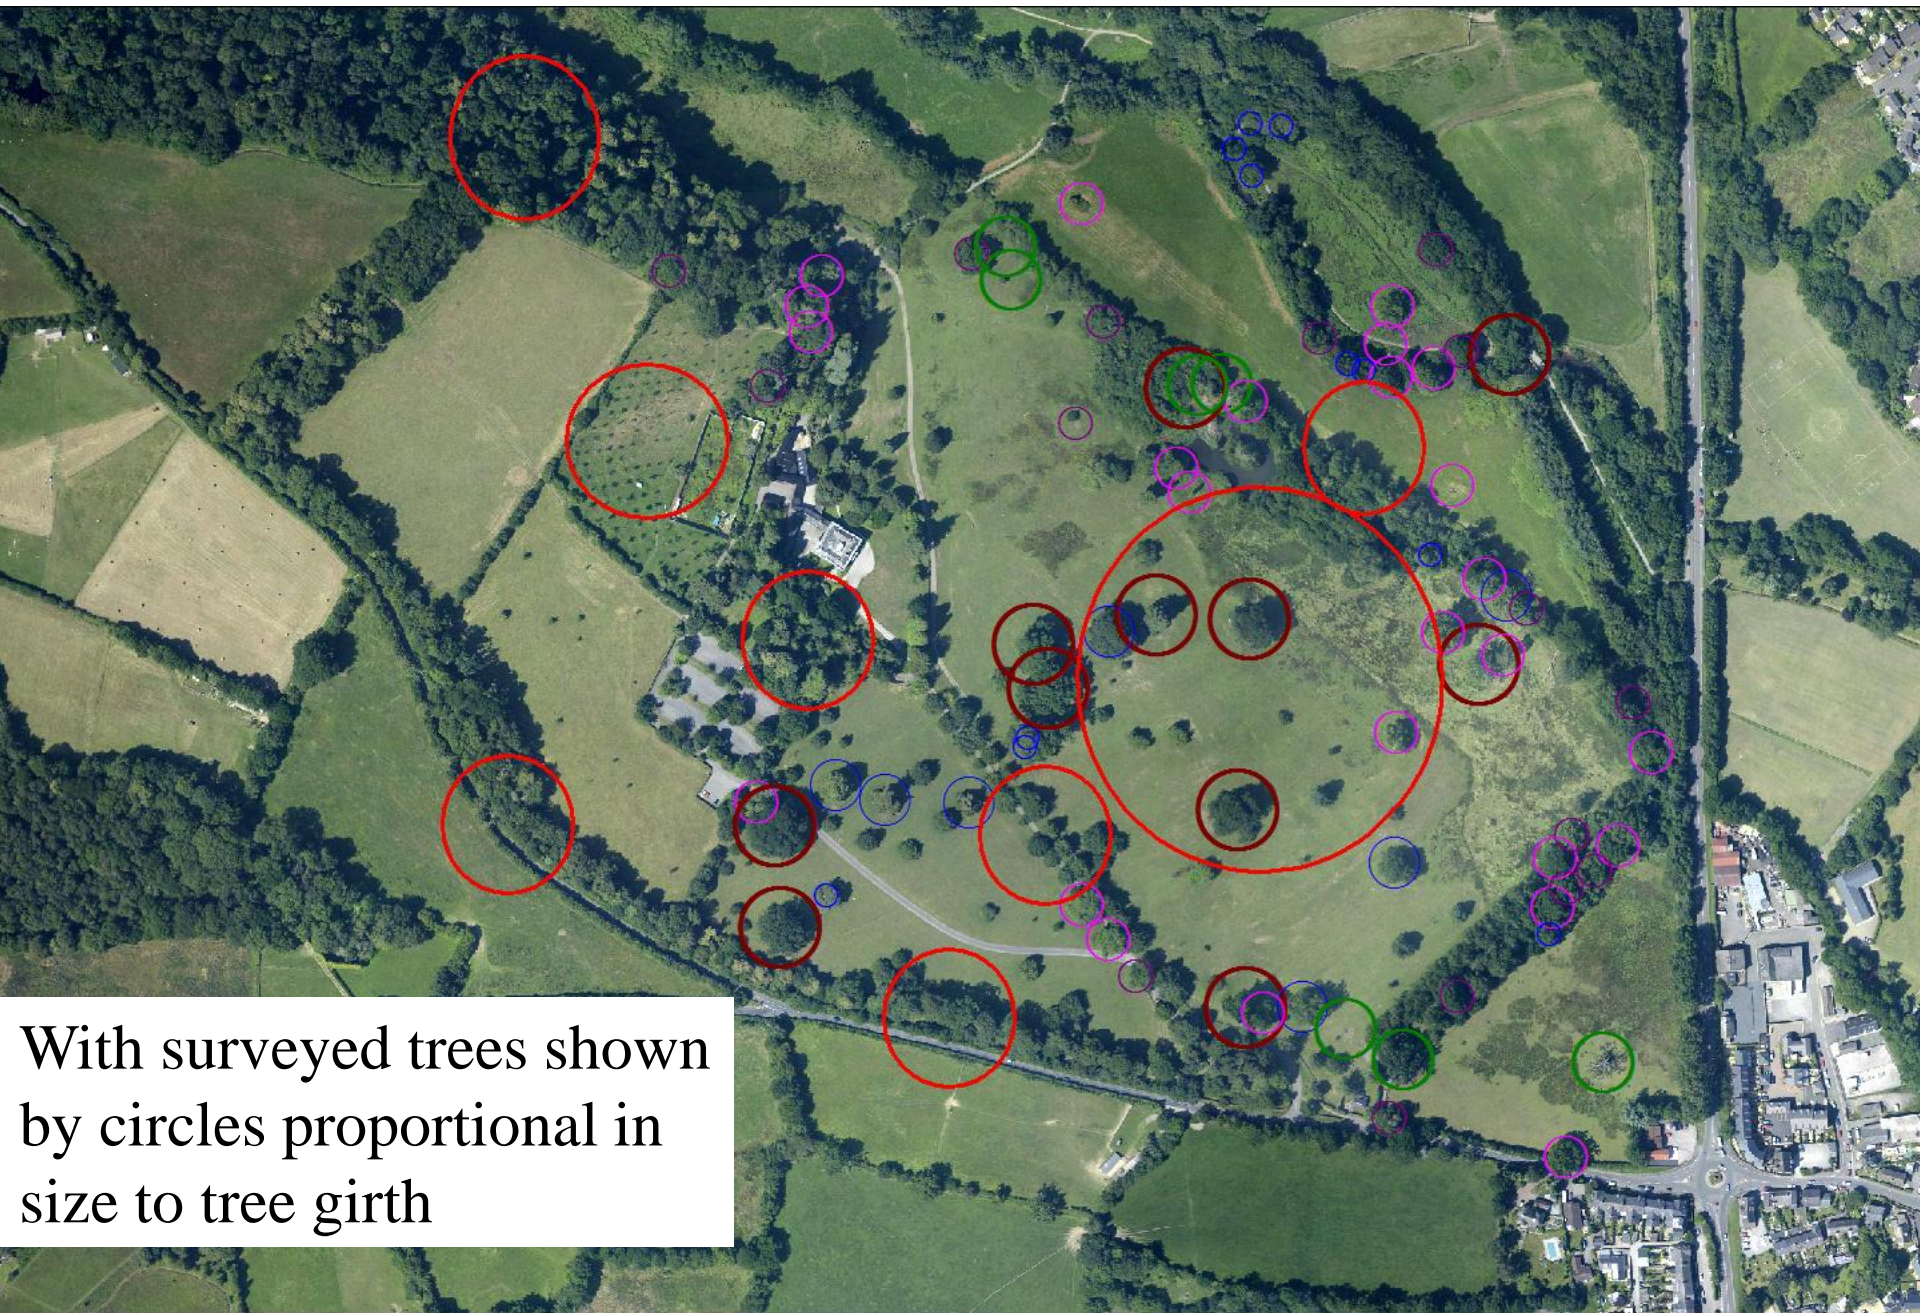

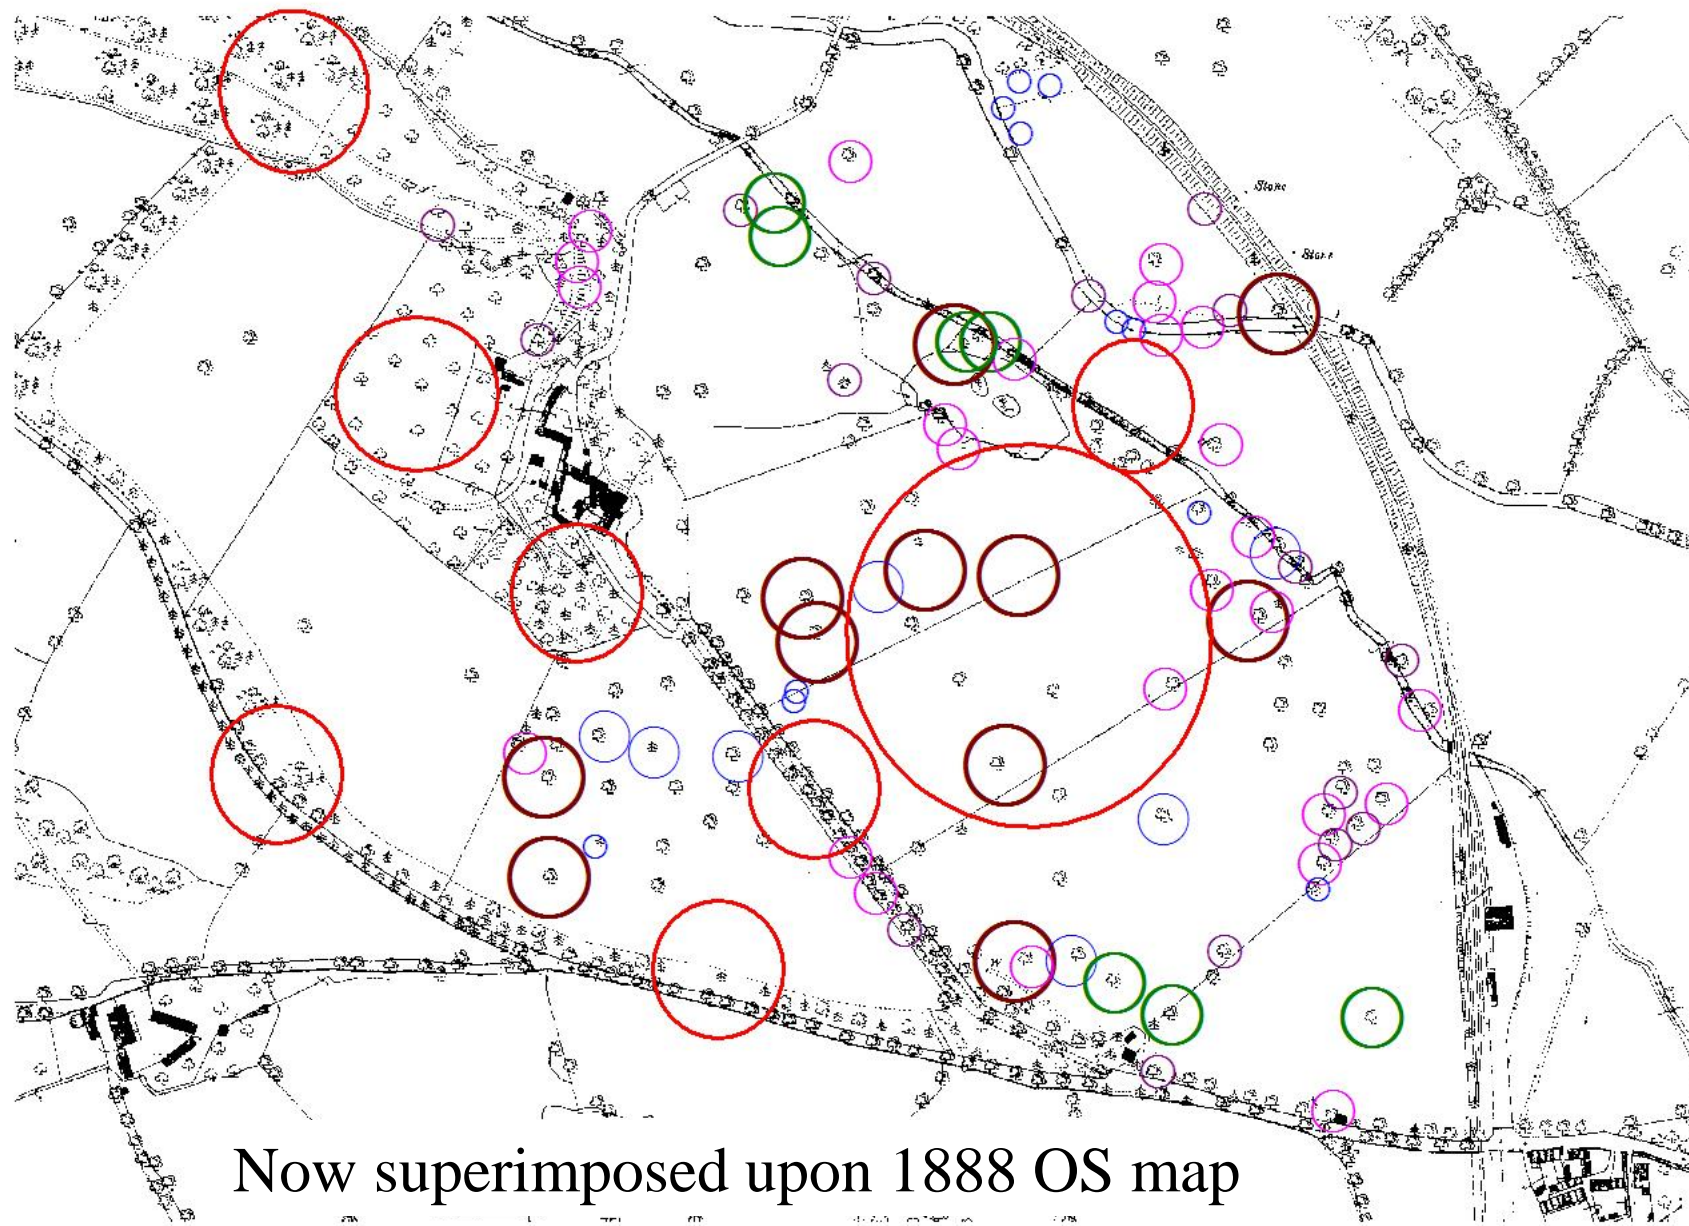

Symbol used to depict broadleaf trees
as individuals - particularly in parkland

Symbol used as a
general representation
of broadleaf trees

With surveyed trees shown
by circles proportional in
size to tree girth

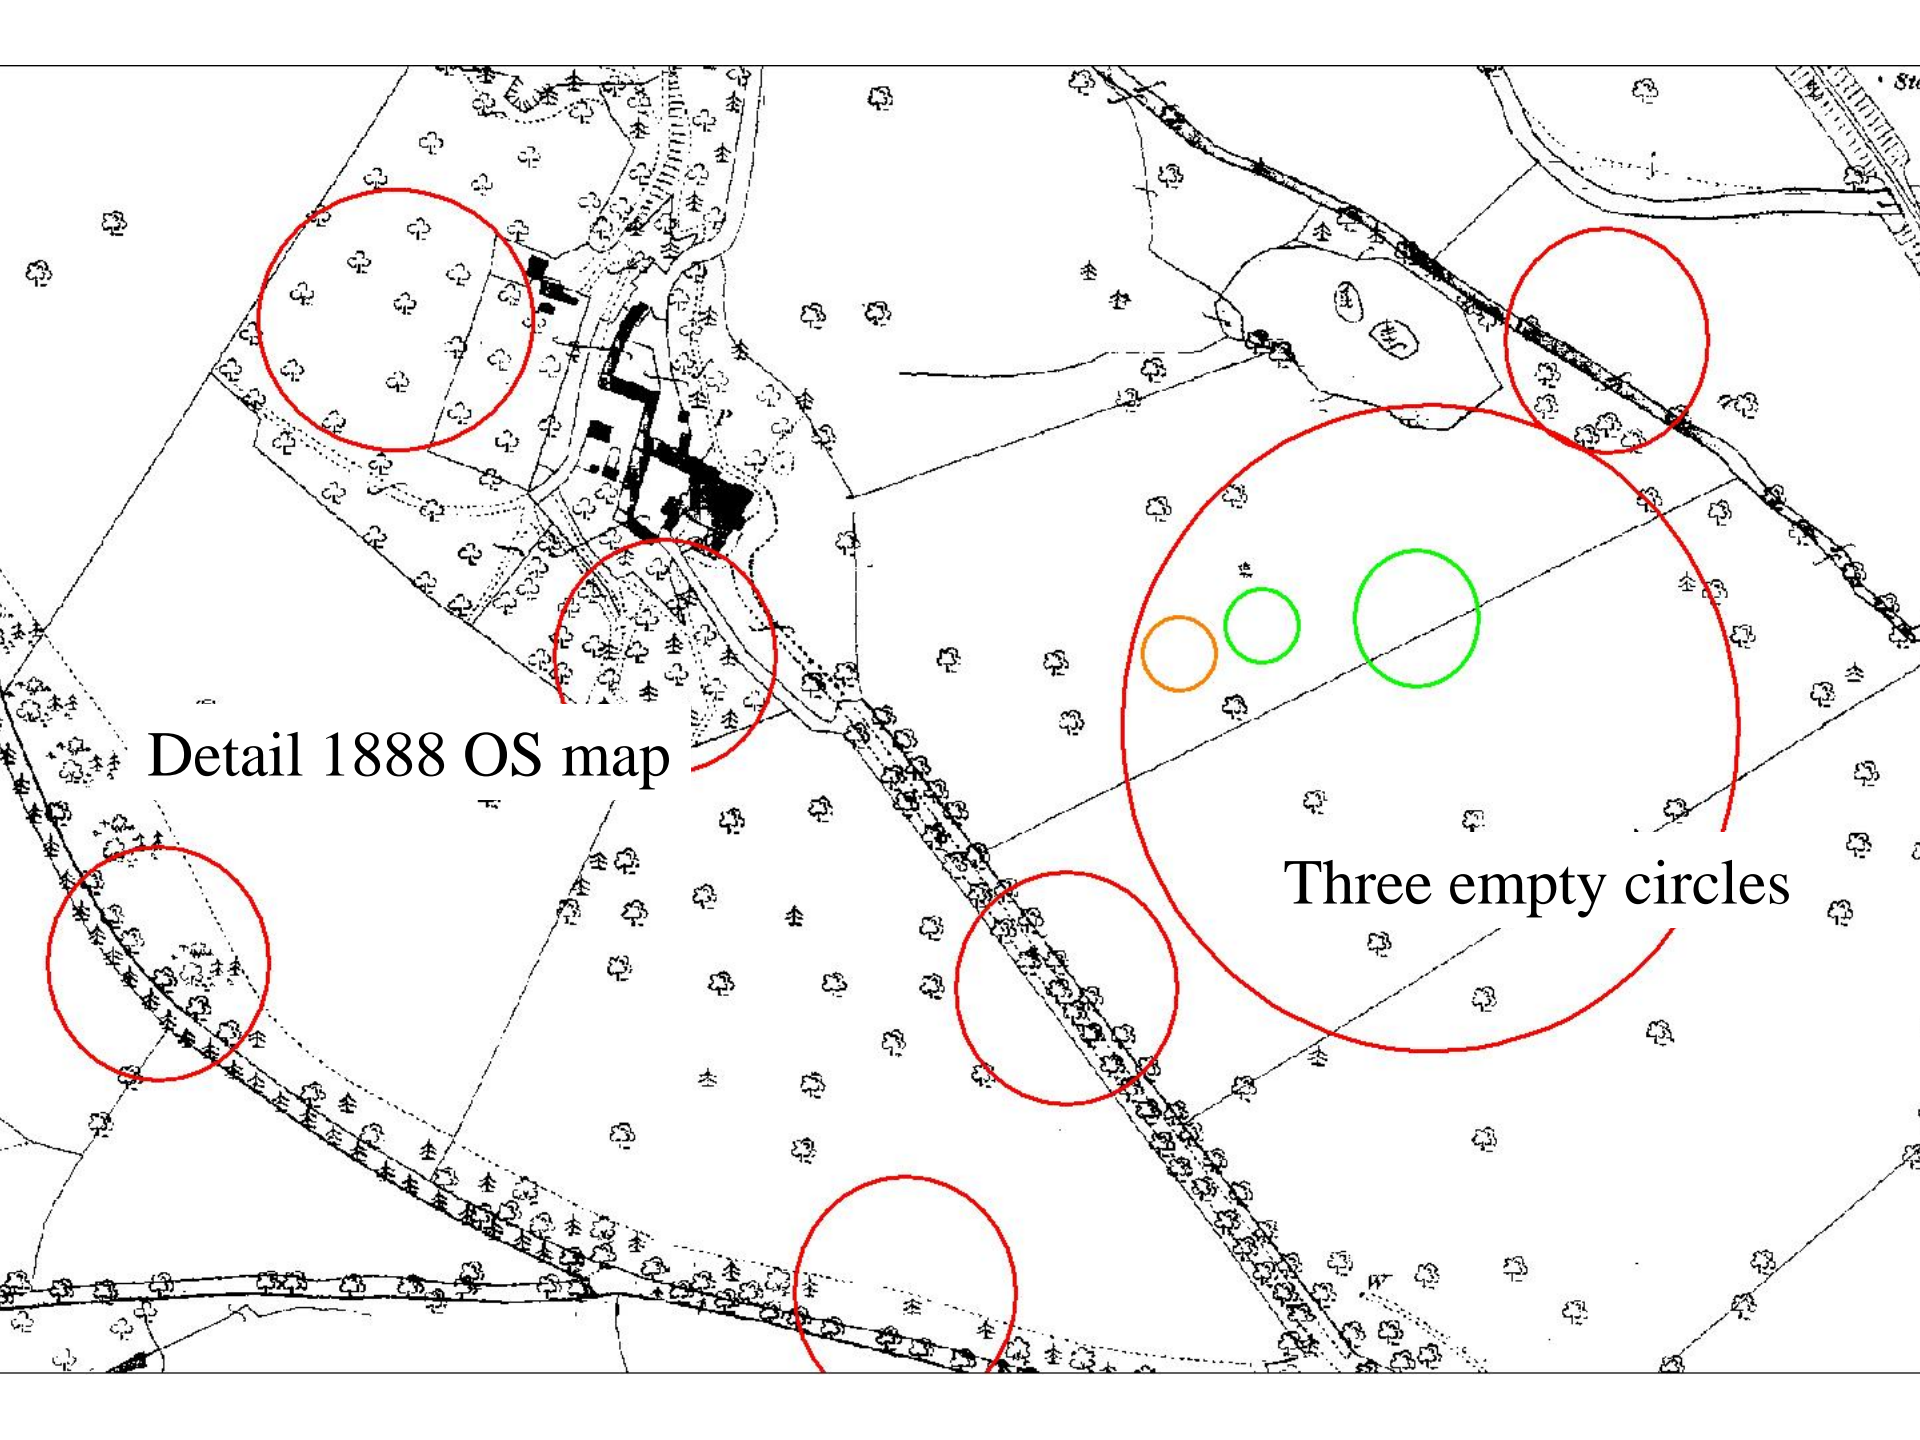

Now superimposed upon 1888 OS map

A large, mature tree with a thick trunk and a dense, rounded canopy of green leaves stands in a grassy field. The tree is the central focus of the image. In the background, a line of trees separates the field from a rolling hill covered in more trees. A small, light-colored field is visible in the distance. The sky is blue with a few white clouds. Two stone markers are visible in the foreground, one near the base of the tree and another further to the left.

Time to look at a real tree

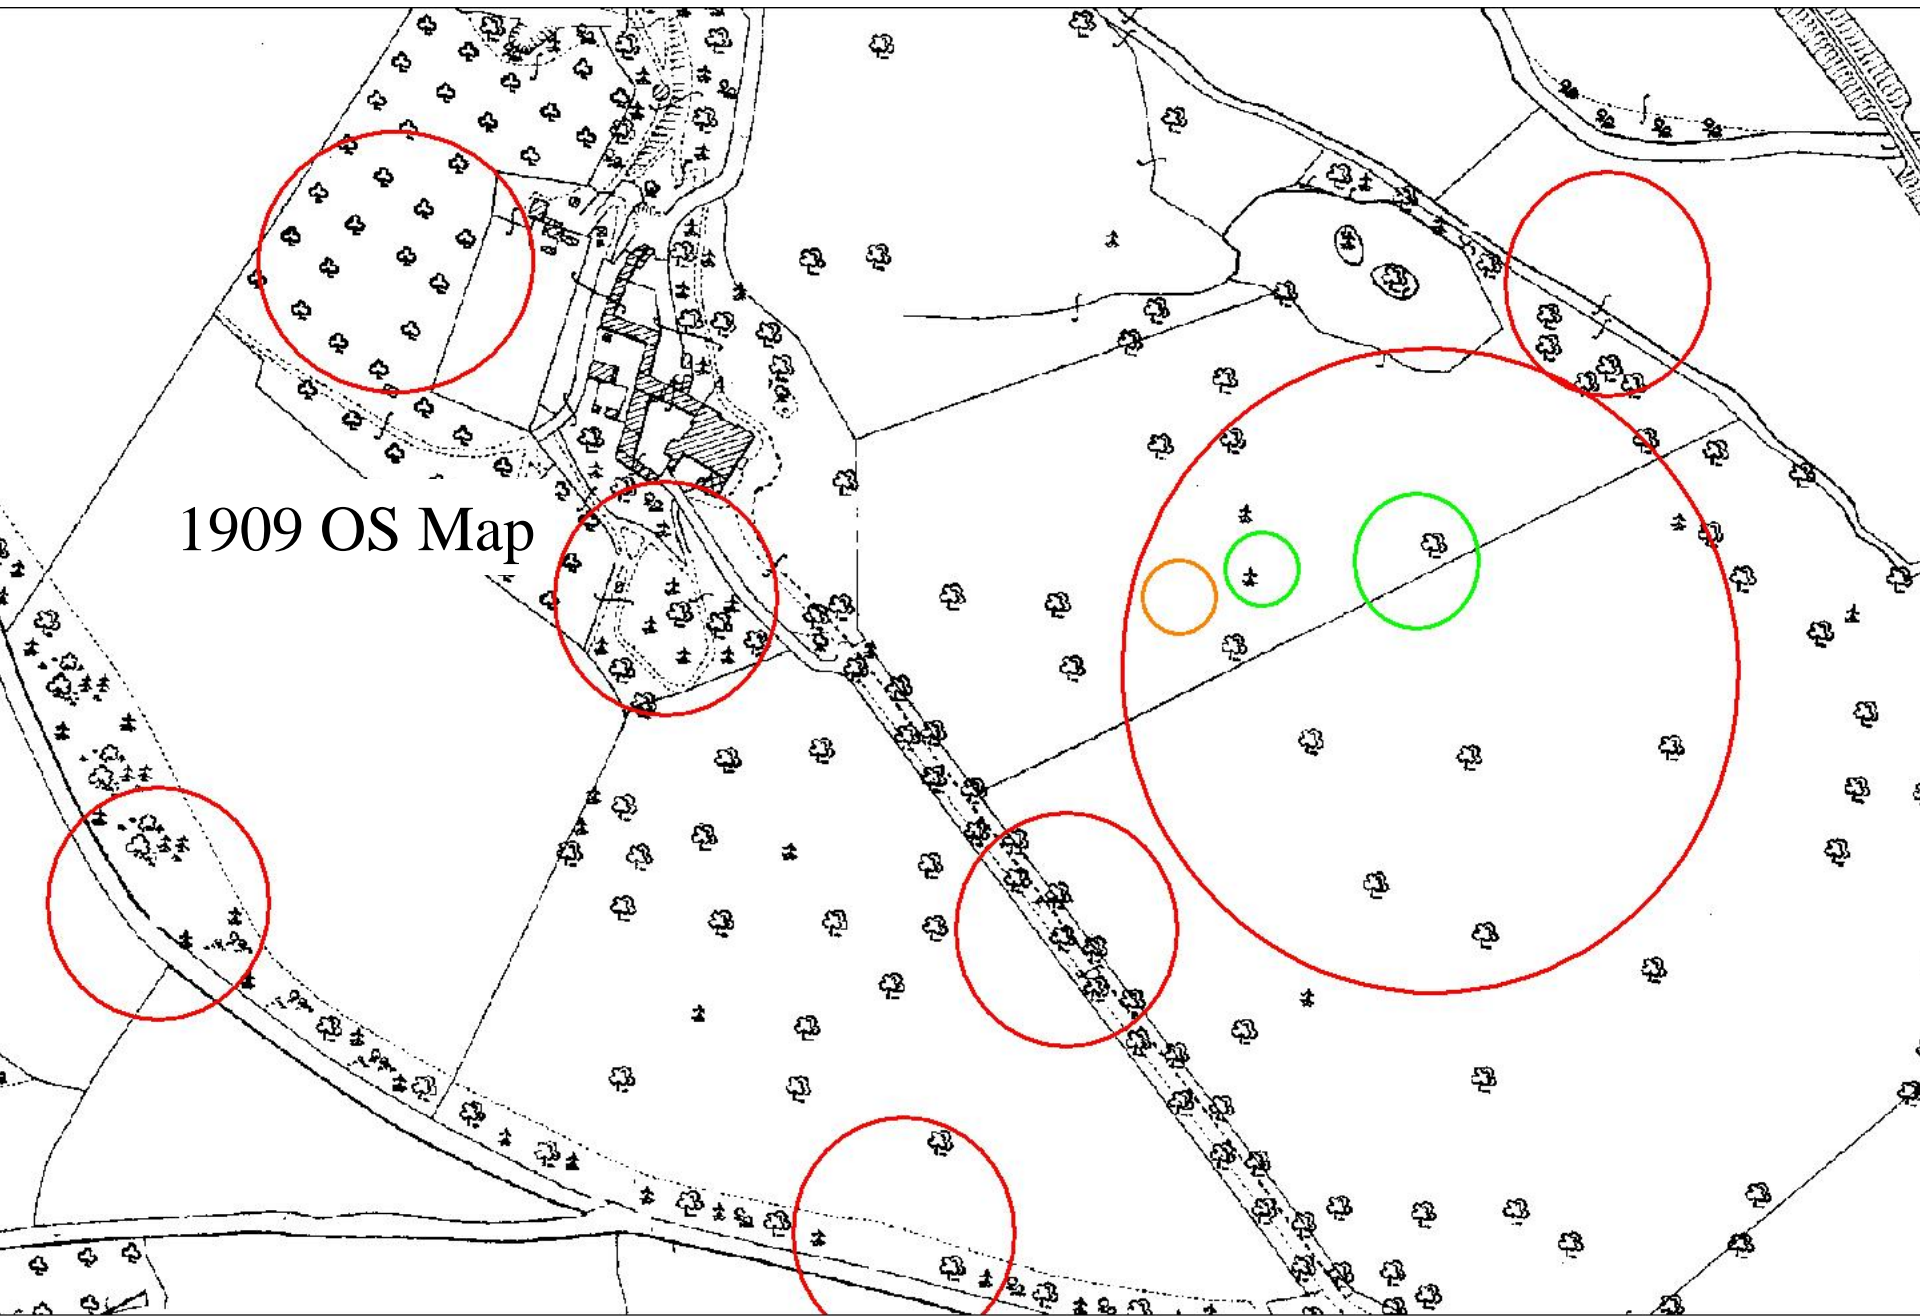

Old field boundary markers

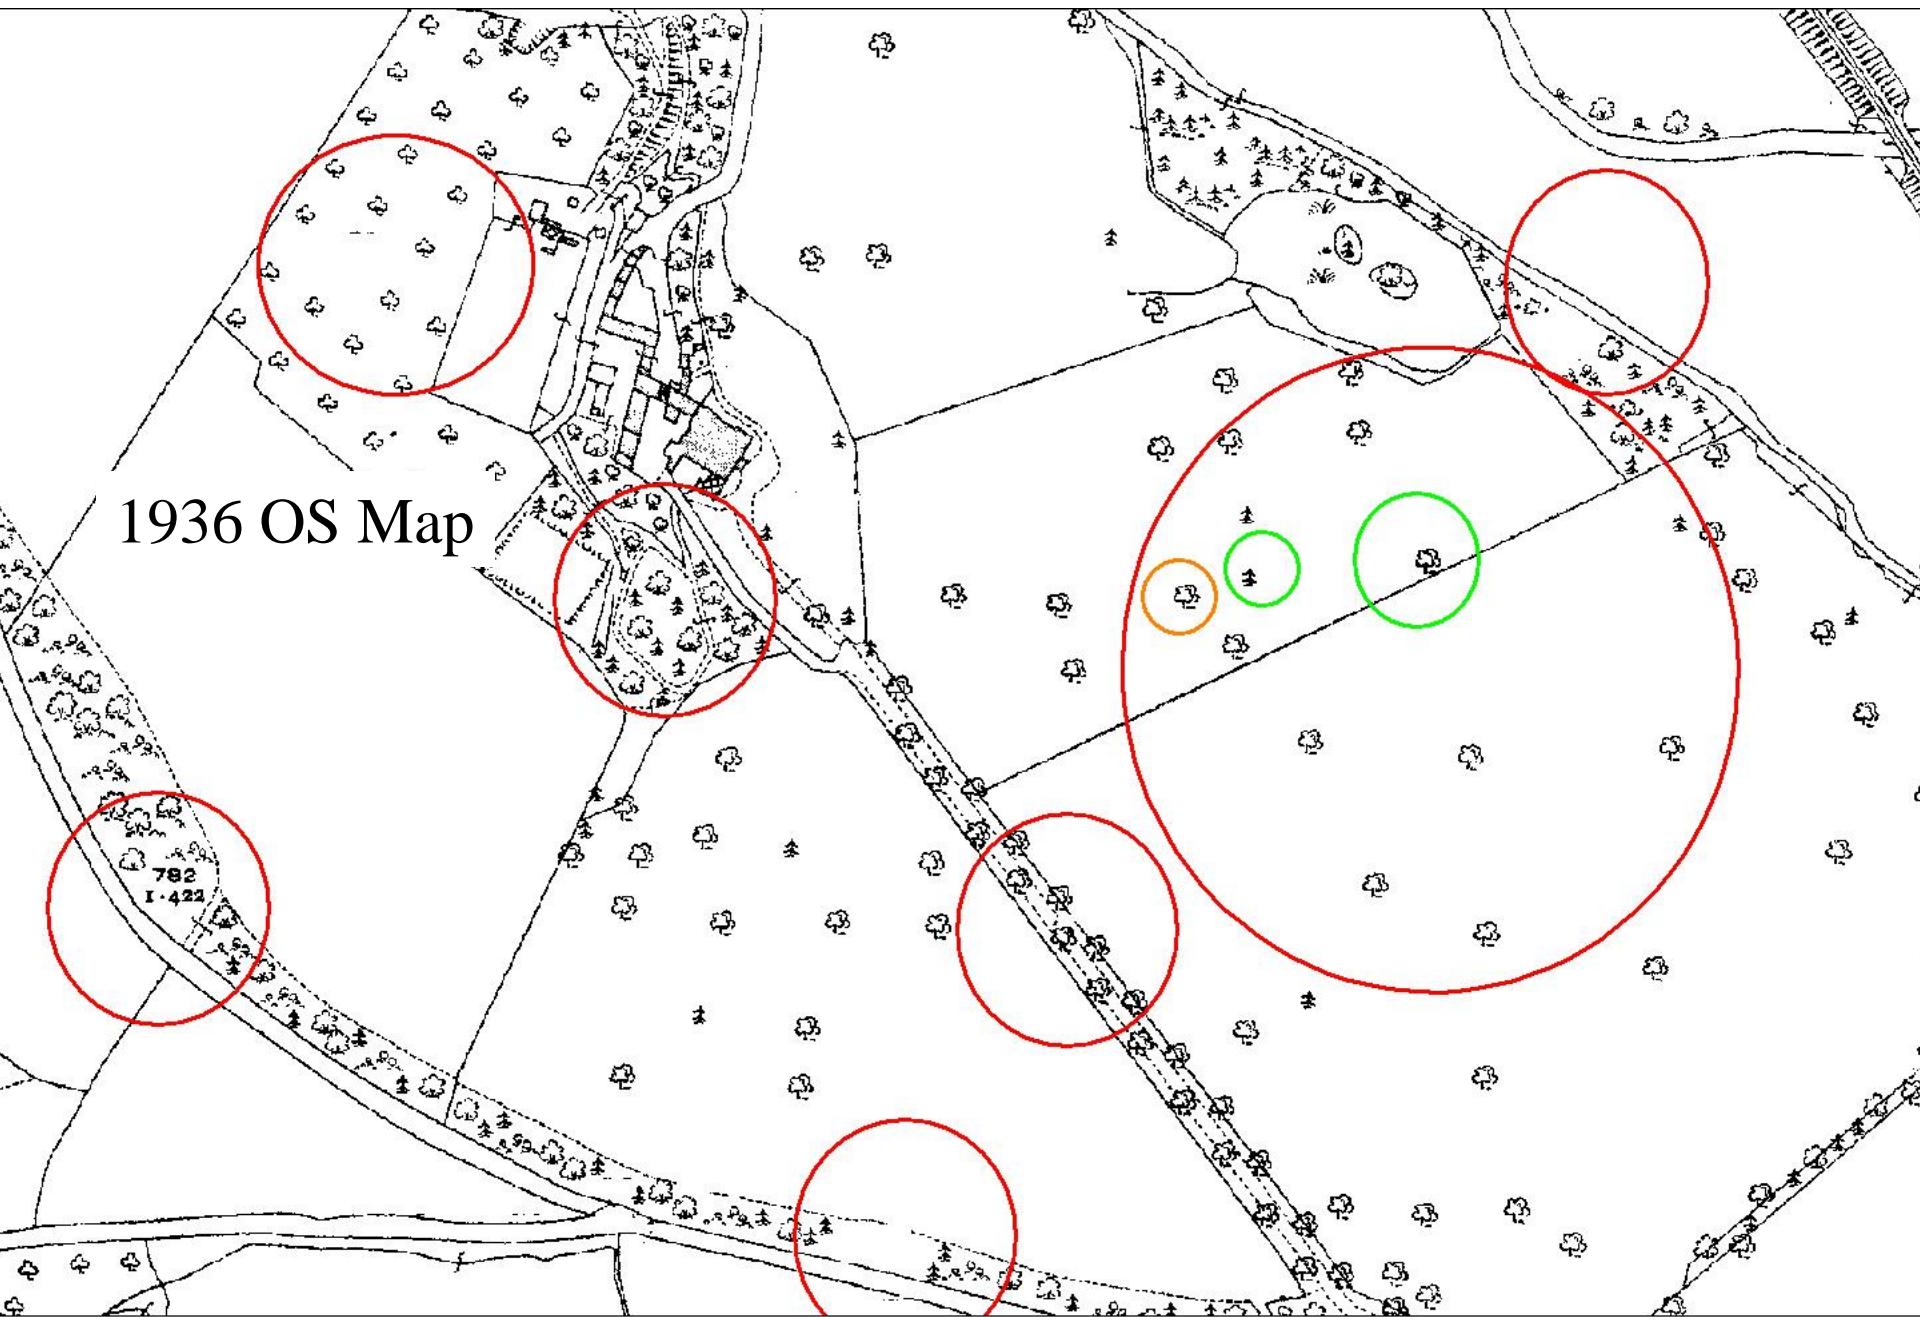

Detail 1888 OS map

Three empty circles

1909 OS Map

1936 OS Map

Summary

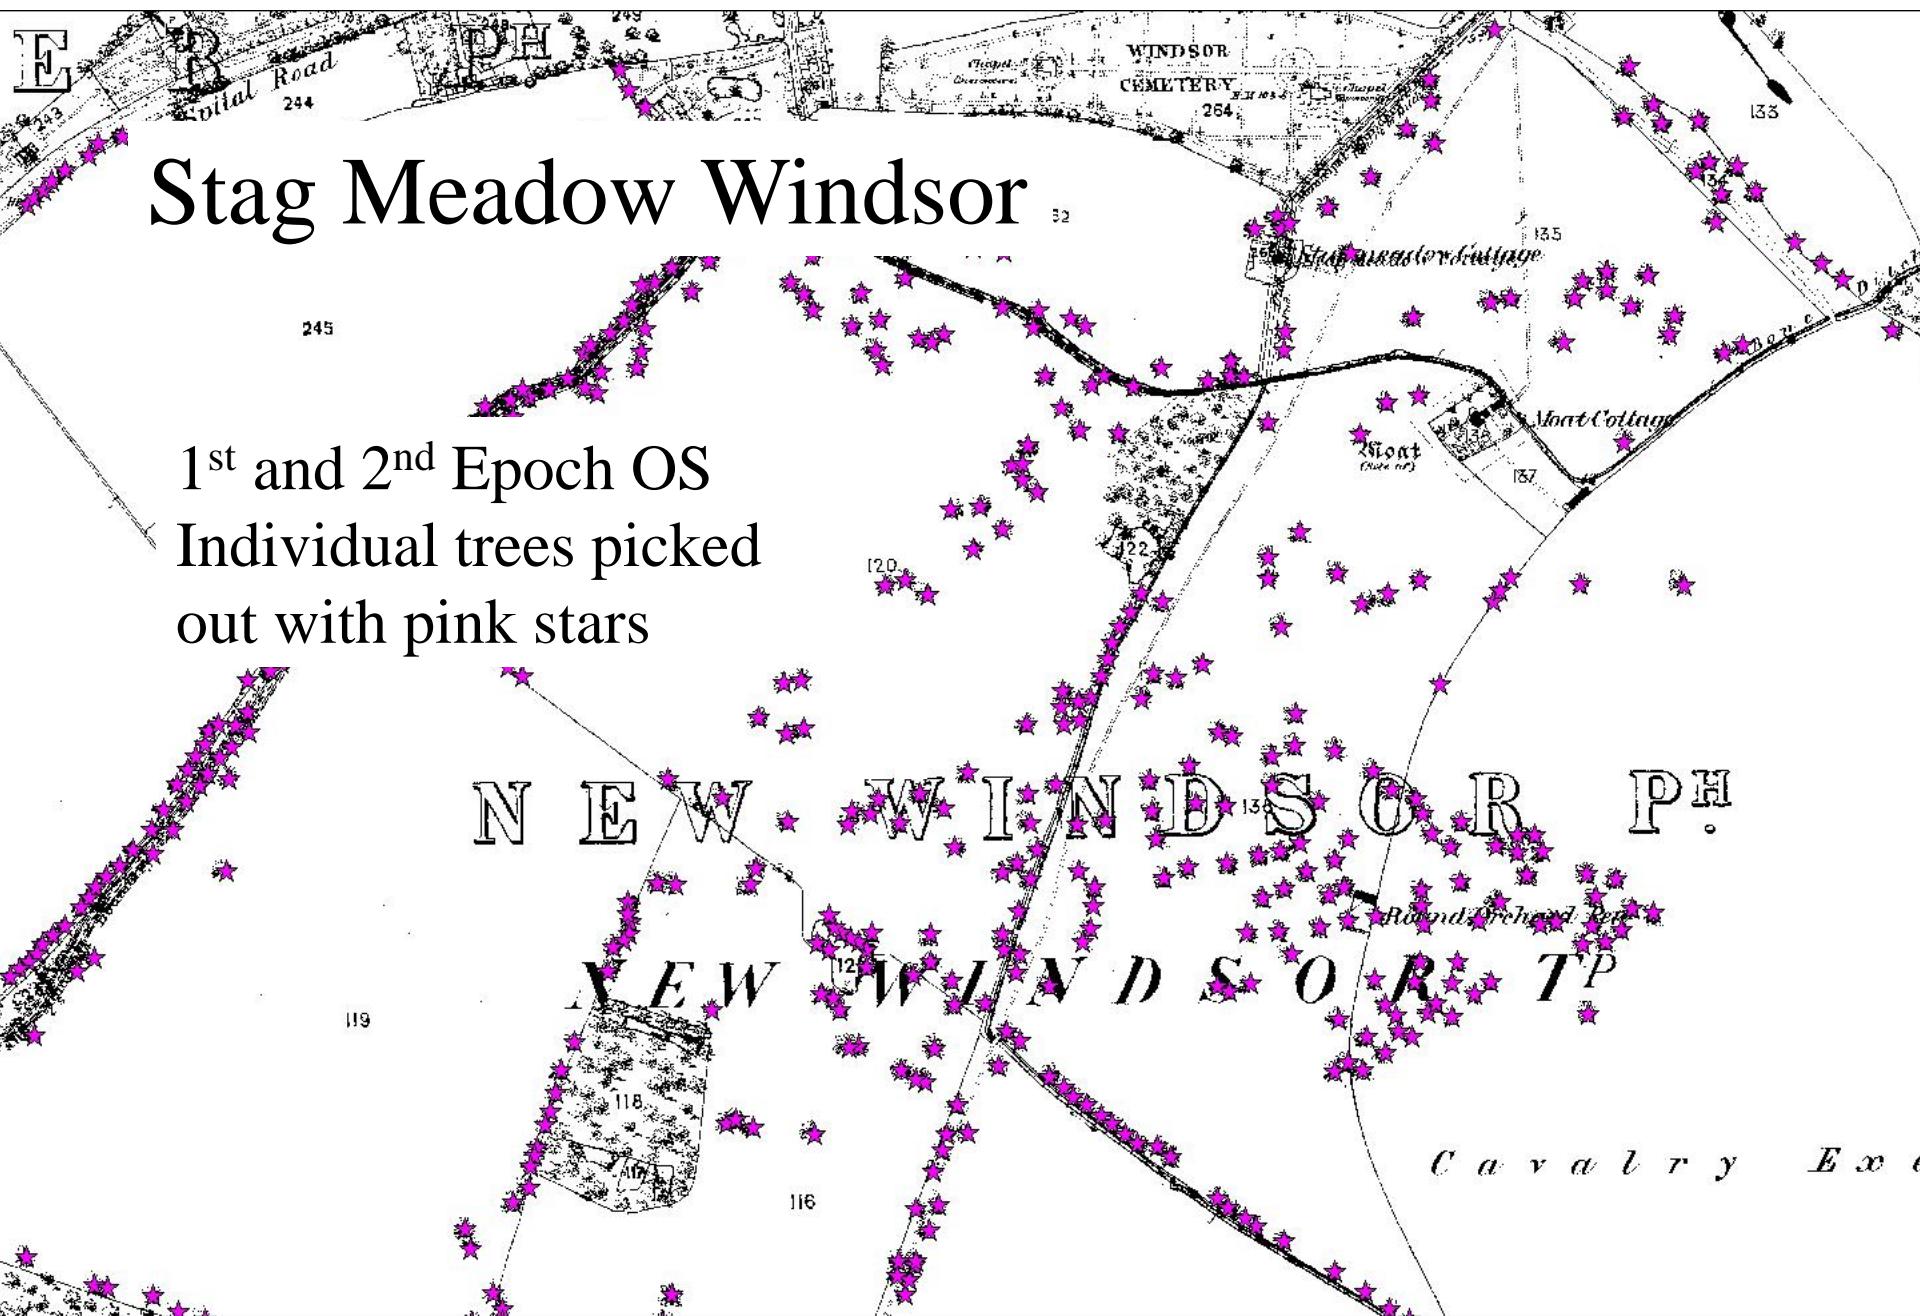

- Old OS mapping, remember, this was carried out by gangs of surveyors using chains, can be very accurate
- Surveyors were human, mistakes were made
- Later Editions were updated, presumably by resurvey

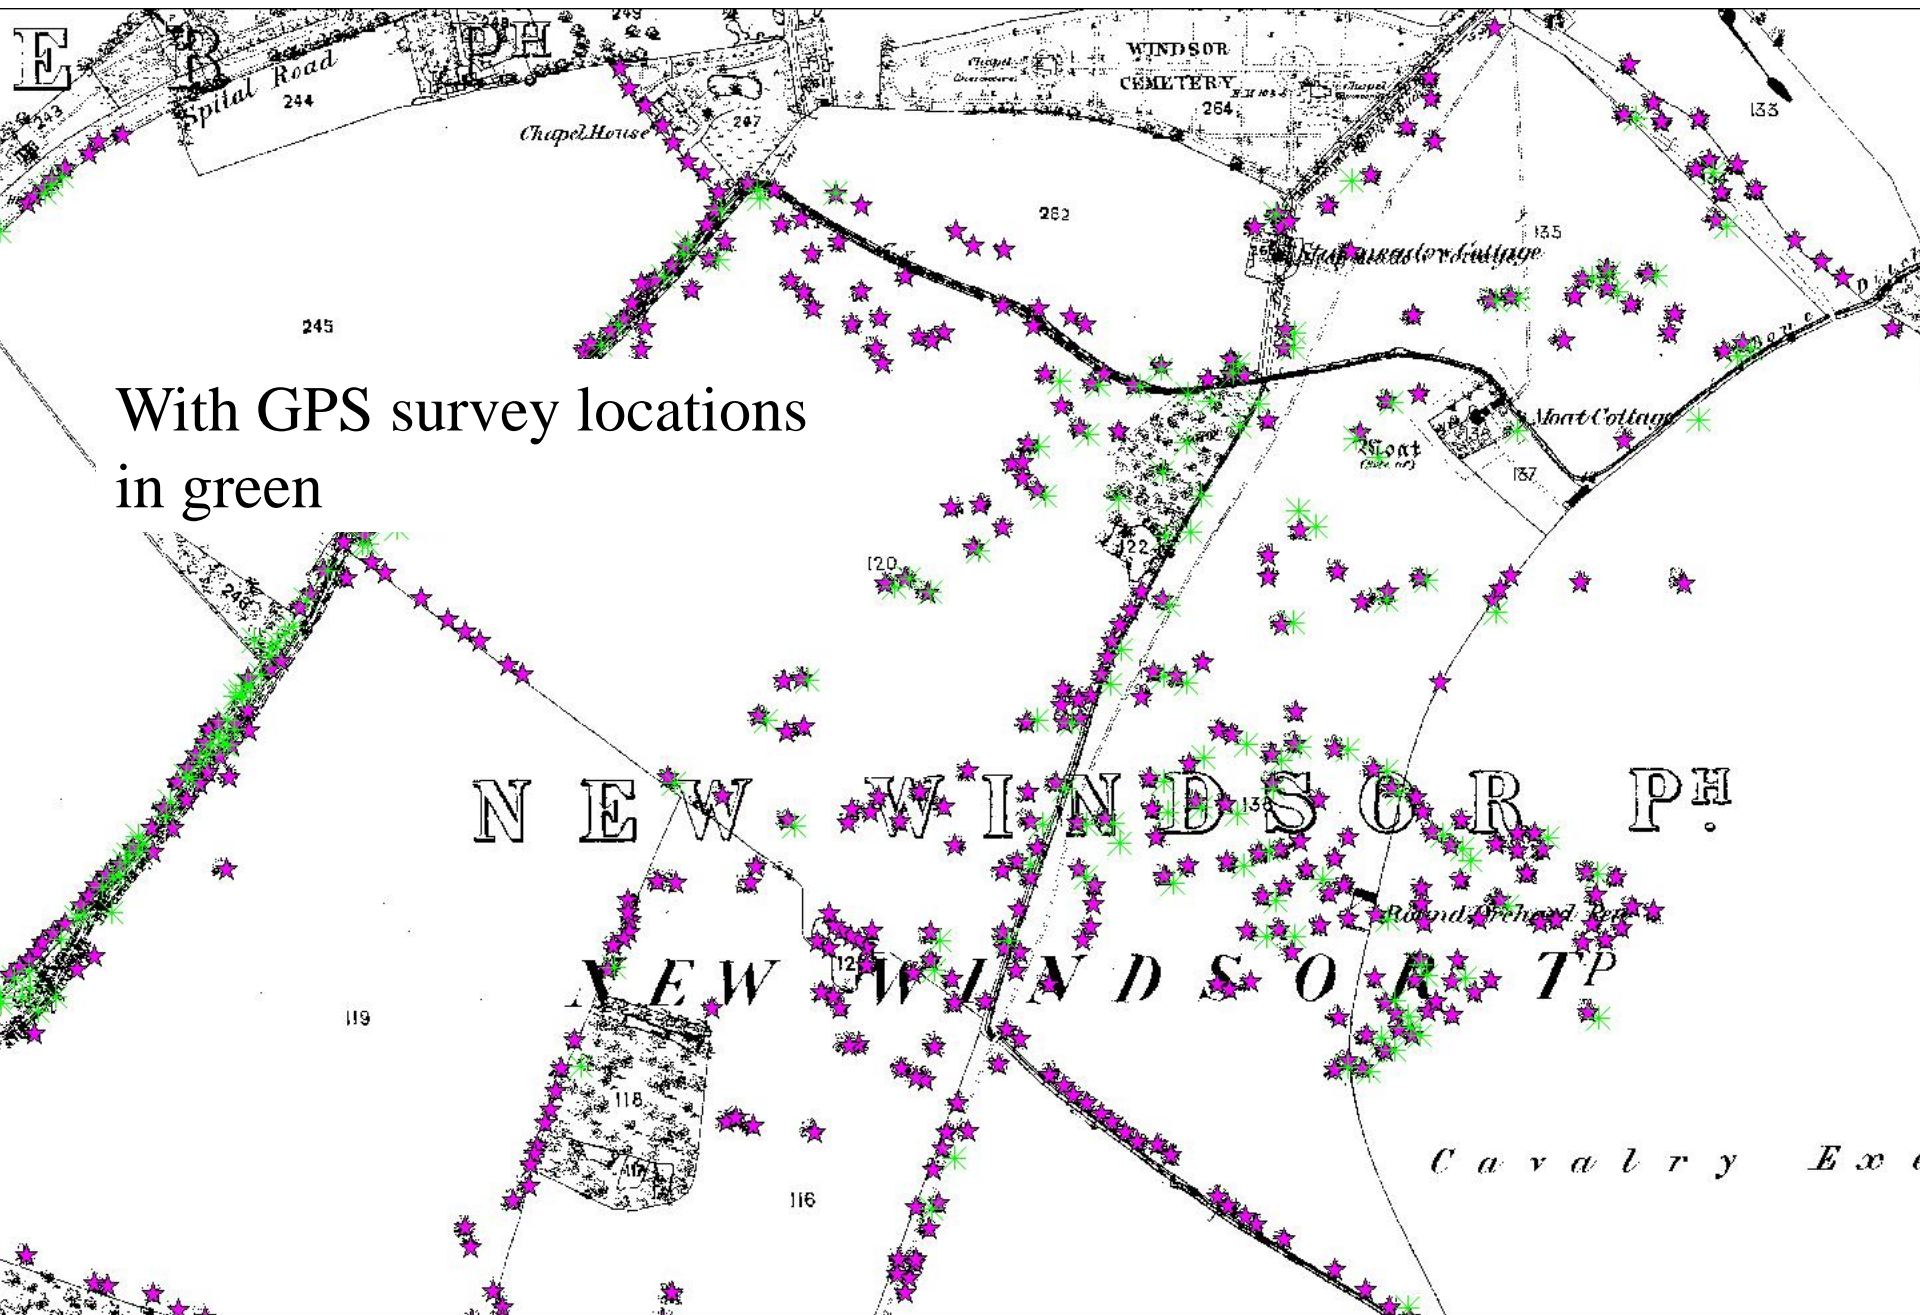

We can use this information to give an insight as to how we might restore our Ancient Treescapes

Case study - Windsor

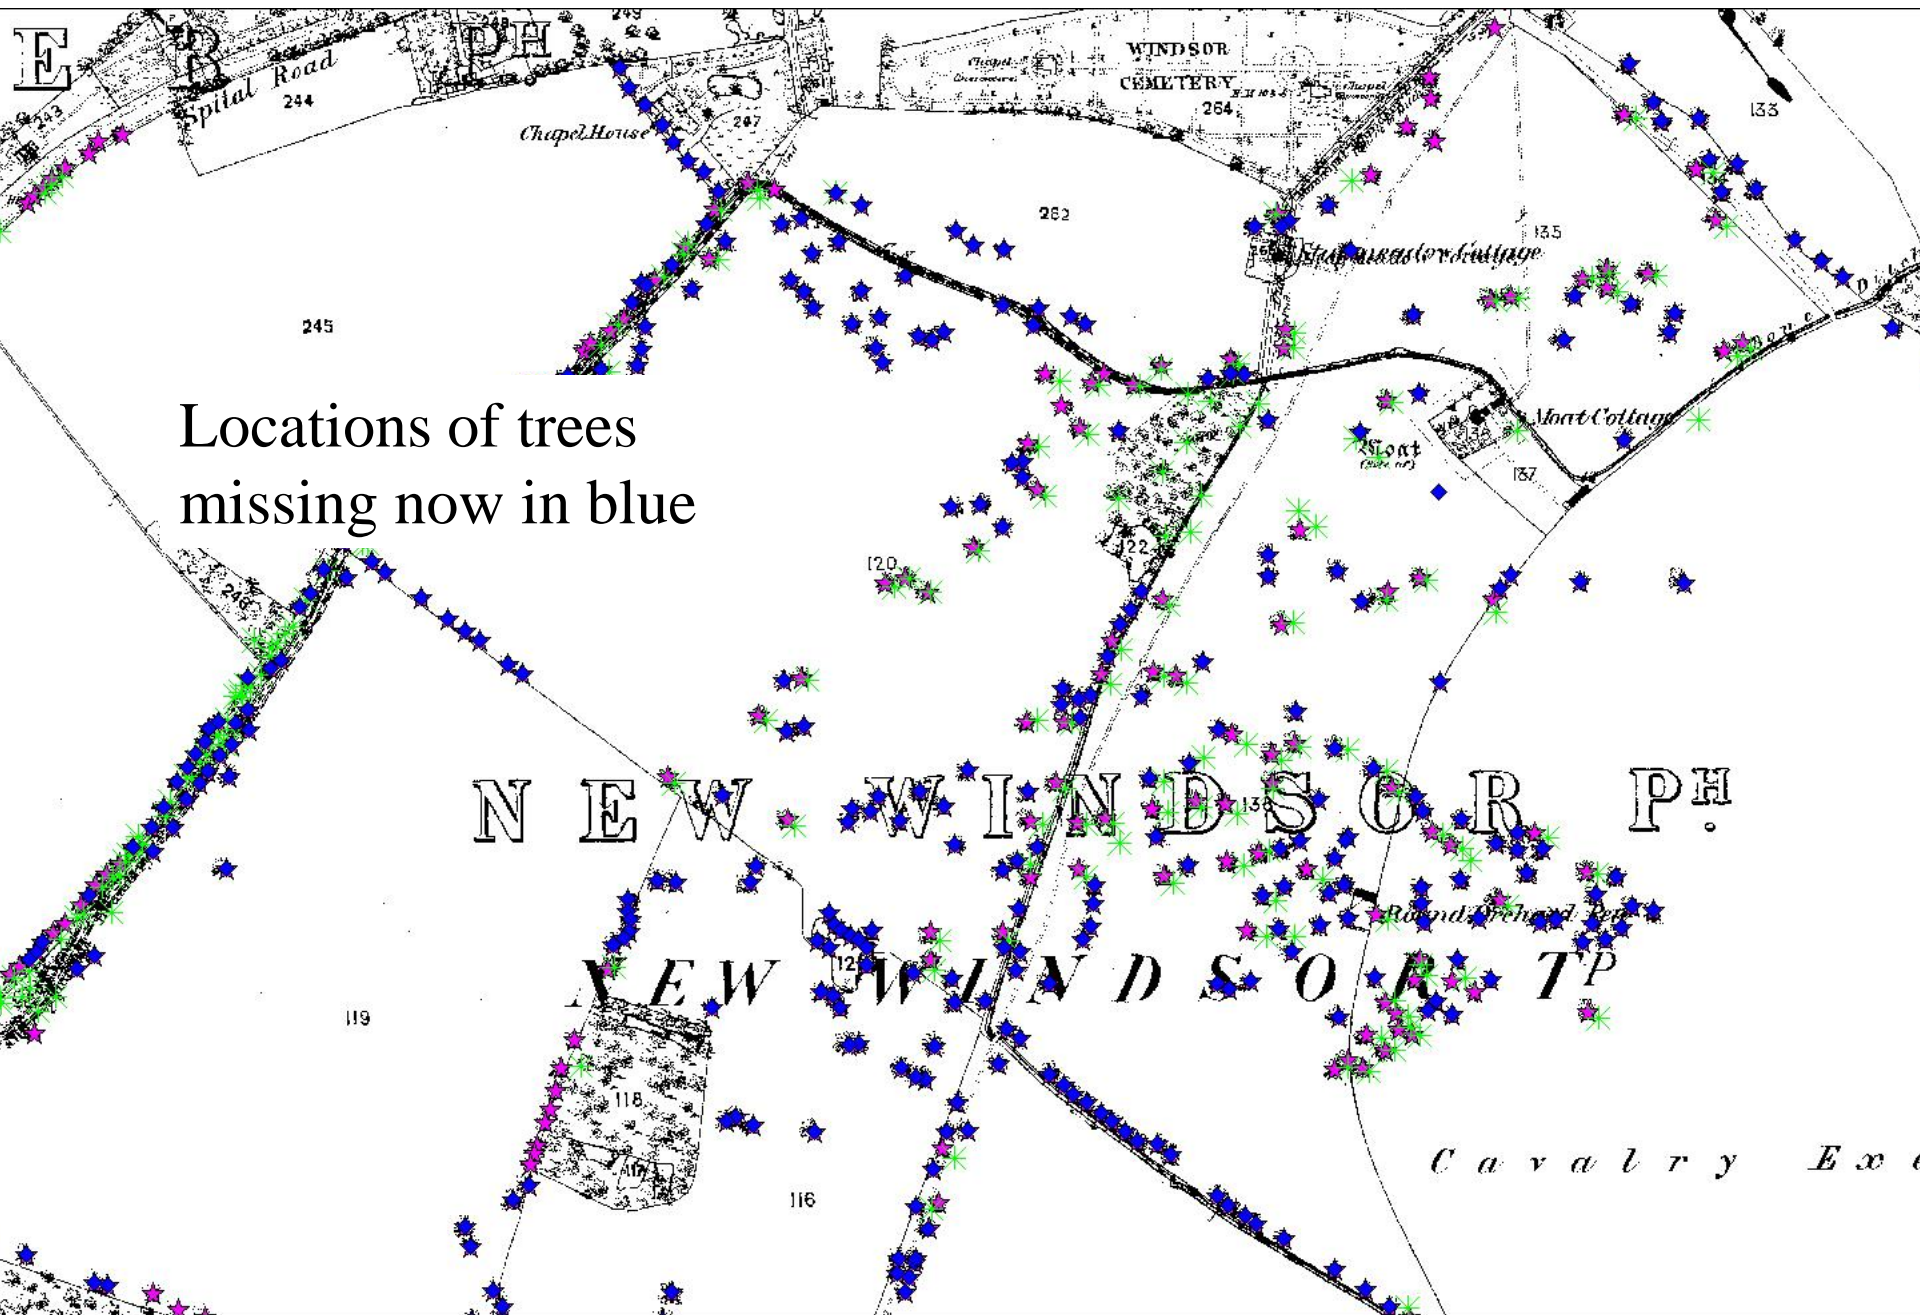

Stag Meadow Windsor

1st and 2nd Epoch OS
Individual trees picked
out with pink stars

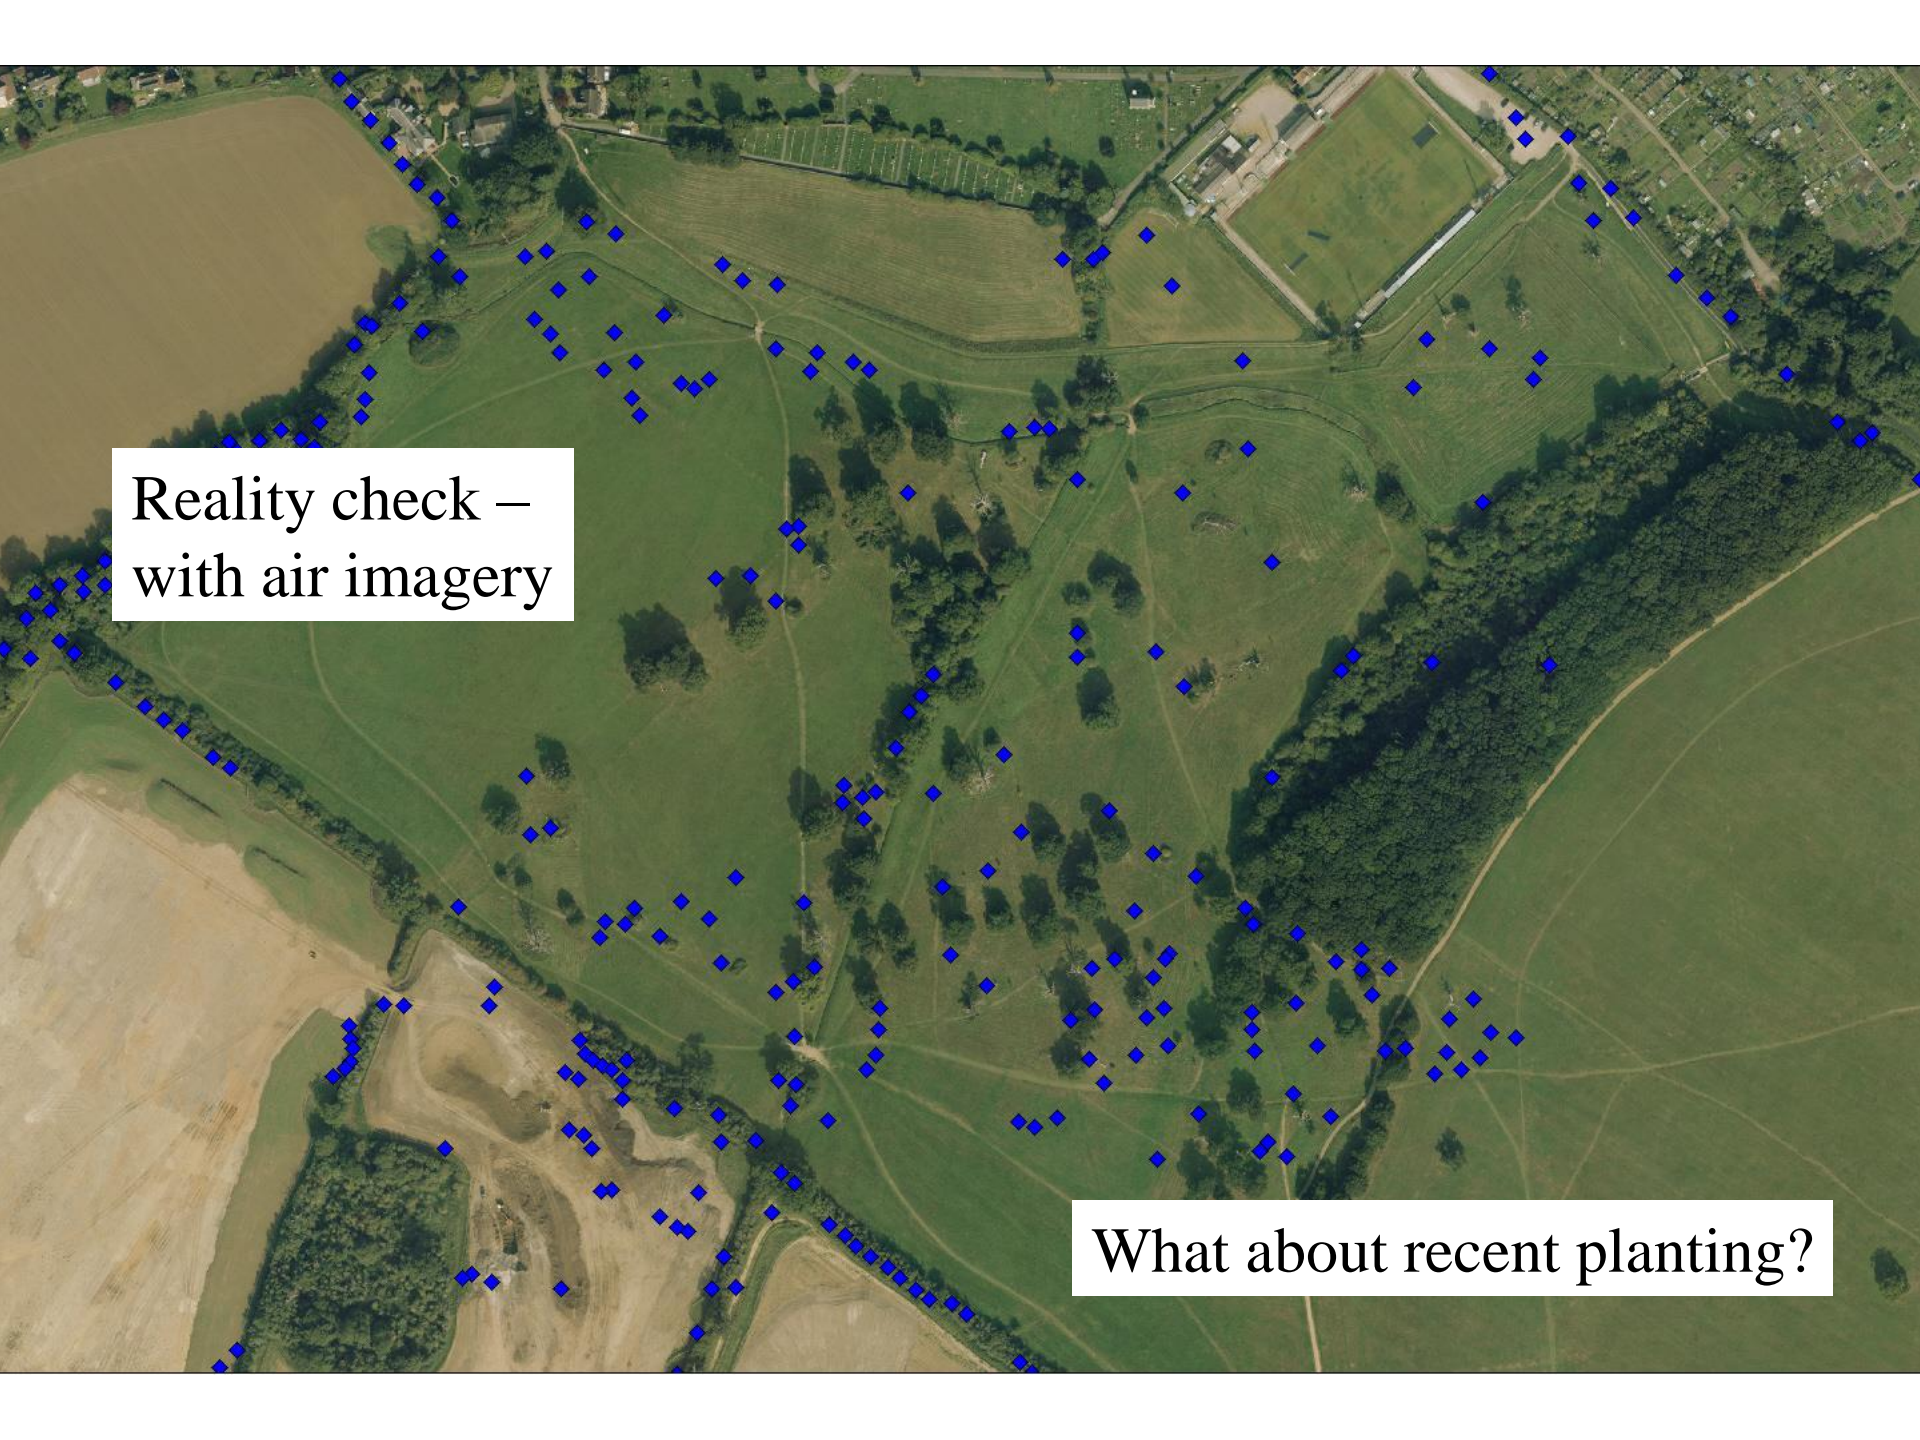

With GPS survey locations
in green

Locations of trees
missing now in blue

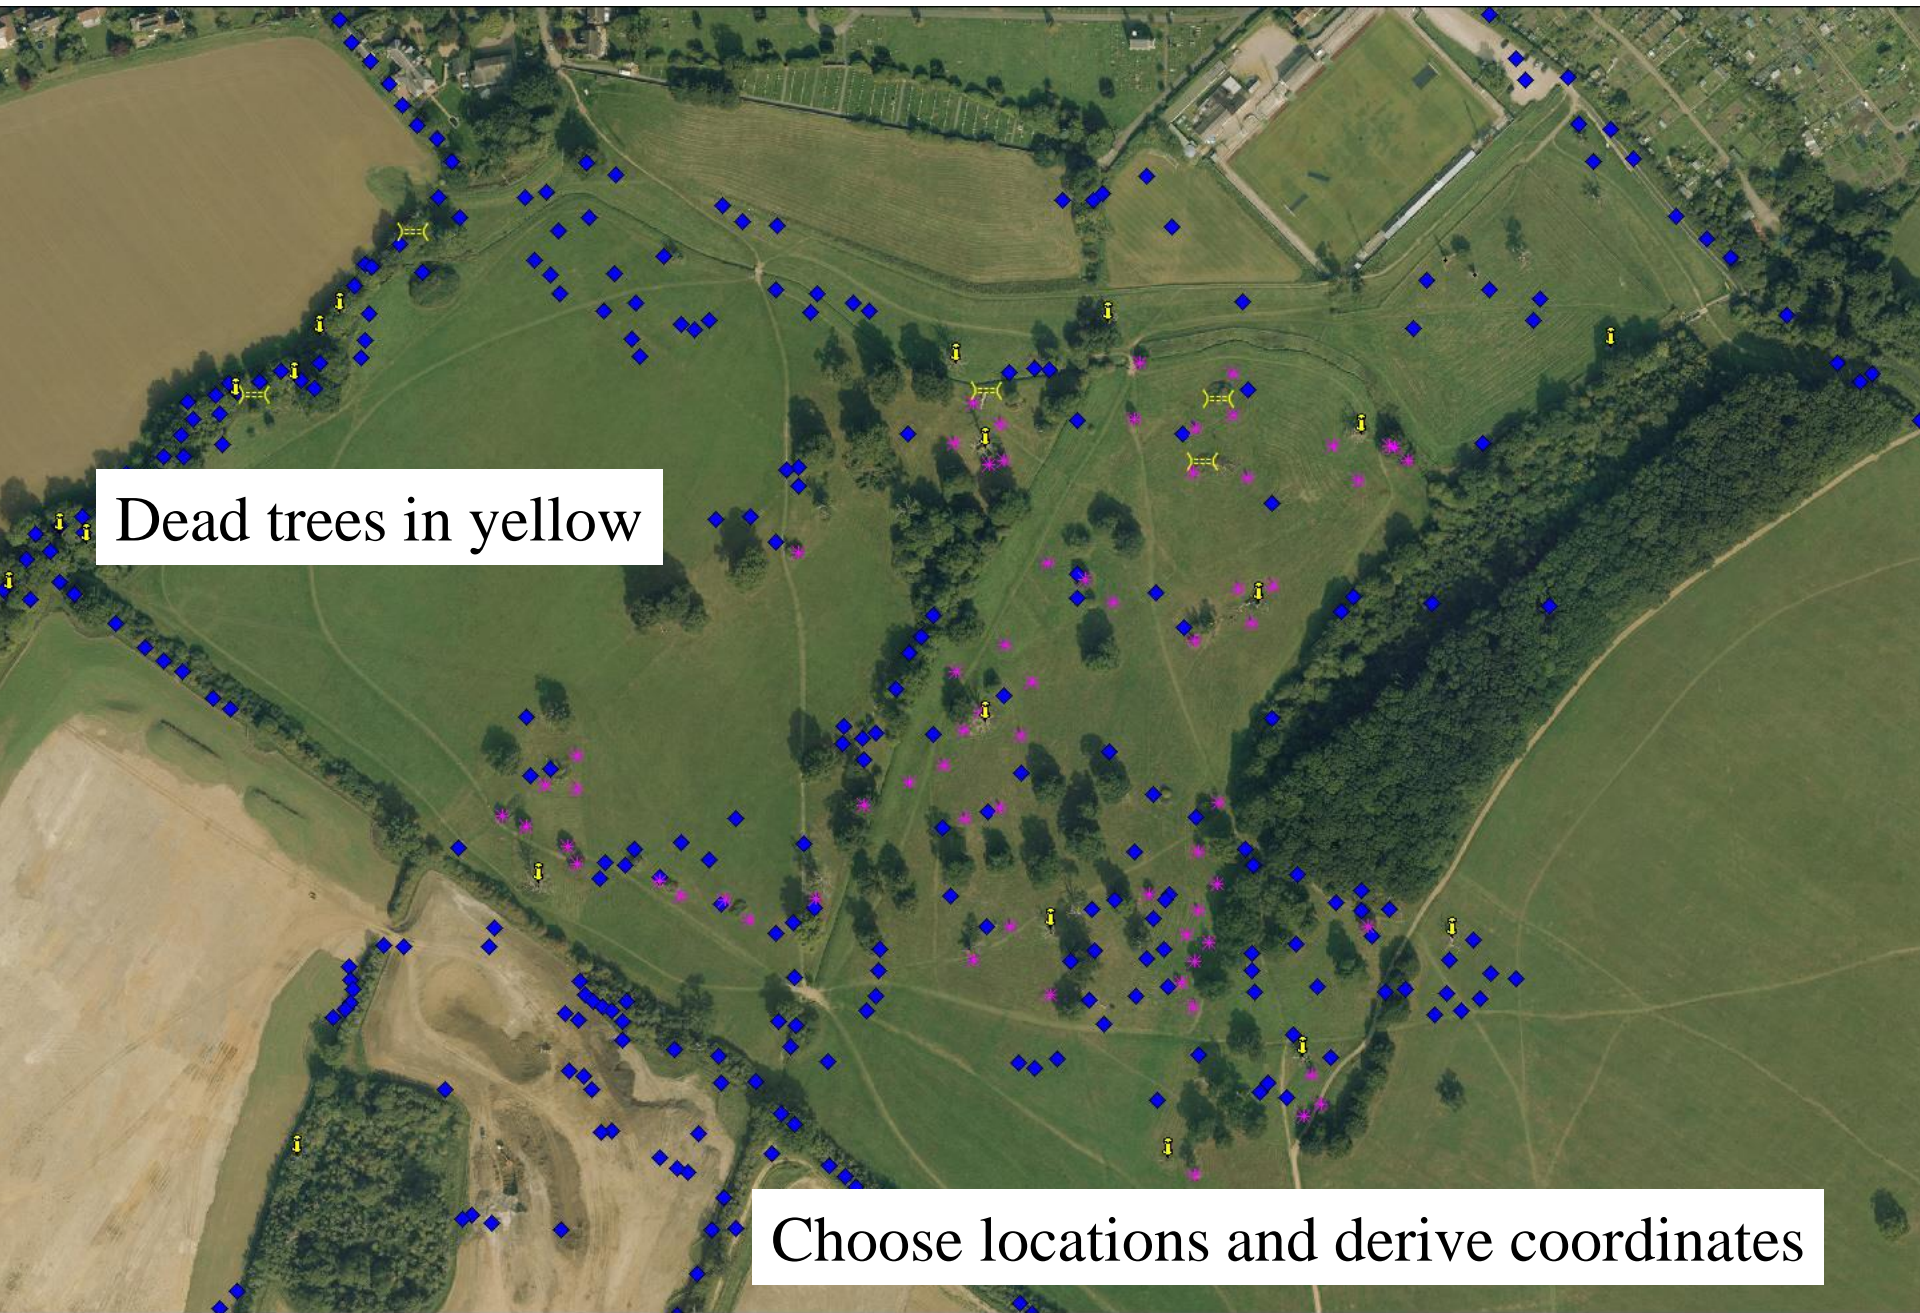

Reality check –
with air imagery

What about recent planting?

An aerial photograph of a rural landscape featuring a mix of green fields, a large brown pond in the top left, and a dense forest on the right. Numerous blue diamond markers are scattered across the landscape, primarily along the edges of fields and around the pond. A cluster of pink star-shaped markers is located in the center of the image, within a green field. Two text boxes are overlaid on the image: one on the left with the text 'Recent planting shown in pink' and one in the bottom right with the text 'What about dead trees?'.

Recent planting shown
in pink

What about dead trees?

Dead trees in yellow

Double-checking

This has been about where to plant

But what!

Oak would seem to be a natural choice for much.

But much of Windsor is public access

OPM?

But whatever, plenty of scope to restore such
treescapes

THANK YOU
